progression in suspension

*Dear Powerflex Partner,*

**Product Information**

Ford Mondeo Mk3 Saloon Models 2001-2007  
Part Number PFR19-910 Rear Sub Frame Bushes

**Powerflex** introduced PFR19-910 Rear Sub Frame Bushes for the Ford Mondeo Mk3 Saloon Models 2001-2007 after identifying an issue with the standard bushes.

The original rubber bushes were failing, in some cases within a year, the bonding between the rubber and outer metal shell deteriorated allowing the centre sleeve to become unattached.

As a result the sub frame can knock and move causing unwanted and unexpected handling problems. As well as being an MOT/TUV inspection failure.

Ford's solution at the time was to supply a complete rear sub frame costing in excess of £250.00 plus labour to install the sub frame. Ford realised people did not want to pay the high price and now sell the bushes on their own, but they need to be installed them with a special glue which needs to set for at least 24 hours, and buy or hire the special tools required to fit them.

**Powerflex** investigated the problem and came up with a polyurethane bush design which is cost effective and easy to install, with no special tools required. The original outer shell is retained and in a majority of cases when attempting to remove the rubber part, it falls out of the outer shell on its own. Only a bit of cleaning is all that is required before fitting the Powerflex bush.

Result. A long lasting **Powerflex** Polyurethane bush that is more reliable and cheaper to fit than the original, and gives better location of the sub frame short and long term.

A winner all round.

*Until next time, the Powerflex team*
